

# Experiment

Title: \_\_\_\_\_

By: \_\_\_\_\_

Date: \_\_\_\_\_

## Background

What are we trying to achieve?

## Result

Qualitative and quantitative data.

## Falsifiable Hypothesis

What results are we expecting?

Format: [specific repeatable action] leads to [expected, measurable result]

## Validated Learning

What did we learn?

Was the hypothesis validated or invalidated?

## Details

How are we planning our experiment?

## Next steps

If the hypothesis was invalidated, we need to return to the ministry model and iterate on that. If the results are unclear, plan another experiment. If the hypothesis was validated, the next experiment can be a concrete step towards realizing the project.
